## COSMETICS

### Production of finest hand cream

#### THE APPLICATION SCOPE / PURPOSE

Hand cream is a cosmetic product based on an O/W emulsion. The active ingredient or fragrances are embedded in oil or water. The release takes place during the application on the skin and provides the skin with moisture, fragrance and/or protection. A finest emulsion can be produced using Kinematica equipment and at the same time offers absolute temperature and pH control during dispersion. The pH of the cream is essential as it influences, among other things, the skin's tolerance.
