Massage oil with essential oils

THE APPLICATION SCOPE / PURPOSE

Massage oils are lubricants for the use in massages. The basis are pure or mixed oils, from paraffin or vegetable origin. Perfumes, essential oils, extracts and oil-based care substances can also be added. In case of essential oils the maximum recommended concentration should not be exceeded in order to guarantee skin compatibility. Kinematica's solutions offer an efficient homogenisation of the essential oils to achieve a high quality oil mixture.
